

Create a more efficient, resilient, secure and robust healthcare network through The Essentials Group—a new business line of The Center for Health Affairs and CHAMPS.

Through your affiliation with The Center for Health Affairs and its business affiliate, CHAMPS Group Purchasing, you can take advantage of our exclusive partnership with AsterionDB, a software development firm that has developed unique patented, horizontal technology that migrates unstructured data to the data layer. This fundamental transformation removes the file system as a cybersecurity attack vector.

The AsterionDB Converged Computing Application, built upon the Oracle Database, provides hospitals, clinical facilities and healthcare providers enhanced zero-trust data storage, processing and a secure environment that will thwart future cyber attacks.

This unique application merges structured data and unstructured data such as documents, DICOM objects and digital media assets by migrating them to the data layer and removing them from the file system.

Through AsterionDB's unified approach, you will see benefits in key areas of operation including audit, compliance, backup and restore.

Users of AsterionDB are able to take advantage of cloud-based elastic computing that separates the cost of storage and processing. AsterionDB also provides the same look and feel for both in-cloud and on-premises environments, which helps to optimize your computing architecture.

## USE CASES

- DICOM
- Healthcare records (EHR)
- S3 Alternative
- Migration of unstructured data to the database

## BENEFITS AND FEATURES

- Enhanced data security
- Unified backup, disaster recovery, audit and compliance
- Built to look and feel just like an extension to the database
- Ease of installation
- Flexible scaling and deployment models
- Increase value derived from existing Oracle installations
- Pathway to optimized, hybrid cloud and on premises systems
